Subject: Dellar Landfill

Todd:

We completed the biological survey on the Dellar property. It was scheduled to be completed earlier, last spring, but due to delays beyond our control it was just completed. The biological survey documented Elder Berry bushes on the property that will require mitigation.

We met with USFS and due to the size of the Elder Berry bushes on site they are requesting either a full HCP for the property. This will take some time, a few years to complete and will not allow us to start construction work as scheduled pursuant to the CAO on July 6, 2010. The other option is a letter from the Water Board stating this is an emergency action required to prevent human health issues, and that the cleanup action must be initiated in July this year, the FSB may reconsider their position and allow closure work to proceed with a full HCP to follow.

Please advise me immediately of your position and if a letter stating the need to close the Dellar Property immediately will be forthcoming.

Thank you

Marty
